

LEGAL PROJECT MANAGEMENT

LEGAL IS CHANGING

Our global Legal Operations team works seamlessly with our lawyers and clients, delivering high quality legal project management (LPM) services to ensure the smooth and efficient delivery of legal services.

By combining market-leading project management and process improvement techniques, and legal technology, we:

- ensure our delivery is client-centric and aligns with your expectations;
- maximise efficiency and provide transparency throughout; and
- ensure you feel that your legal spend is optimised.

Our team members have industry-recognised project management certifications (such as PRINCE2 and Agile) and legal backgrounds, many are lawyers. This blend of expertise means they understand the unique dynamics of legal work and can apply the right tools and techniques to deliver optimal outcomes.

We also work with clients on in-house initiatives such as the design of bespoke LPM training programmes and tools, and advising on the application of Agile Project Management techniques for in-house legal.
